dribbble · behance · medium · case study

Product design for dense data surfaces in banking, trading, and fintech – designed as a system, prototyped in code.

Experience

VCG Markets

Senior Product Designer

Feb 2026 – Jul 2026 · Remote · Contract

- Set direction end-to-end for core trading surfaces – charting, order entry, account flows – from persona research to ship; rebuilt the Equity Chart information architecture around the one question a trader opens the app to answer
- Owned the cross-platform design system: token architecture, component governance, Figma libraries adopted across squads
- Co-created AI Pulse – AI insight inside a live trading flow, each reading anchored to the figure it came from, so the claim stays checkable
- Designed the Pro subscription paywall and the first-time-deposit nudge – monetisation held to the trading flow's clarity bar

RootstockLabs

Senior Product Designer

Sep 2025 – Dec 2025 · Remote · Contract

- Shipped product design end-to-end across web and mobile for a Bitcoin sidechain – a 0→1 brief
- Designed DeFi onboarding for users with no crypto background, building the mental model before the interface
- Ran product and marketing design together – ecosystem storytelling and a campaign video (10K+ views)

Backbase

Senior Product Designer

Aug 2021 – Jul 2025 · Amsterdam, Netherlands

- Co-created a design language bridging brand and product for a banking platform in 40+ countries – token architecture, component APIs, cross-platform, WCAG AA
- Owned its information architecture: a three-surface entry filter and promote-by-frequency governance kept it a language, not a catalogue
- Rebuilt Figma components with token-driven theming (client implementation –40%); defined motion and interaction principles across web and mobile (design-QA defects –18%)
- Led a numbers sub-system for data-dense banking surfaces – tabular figures, sign treatment, negative-value hierarchy, density modes – held against WCAG contrast; co-created sub-systems for empty states, success messaging, the visual asset library and stepper navigation
- Shipped THRIVE, a customisable premium banking theme; Standard Bank Group / Stanbic Kenya signed a new contract after seeing it
- Owned discovery on the language: benchmarked real users against competitors through one protocol, before design and after, so adoption was measured not assumed
- Led design-language adoption across nine product teams without formal reporting lines; mentored designers on system contribution

Education

Ural State Academy of Architecture and Arts

BA, Industrial Design

2006 – 2011 · Yekaterinburg, Russia

Sverdlovsk Art College

Graphic Design

2002 – 2006 · Yekaterinburg, Russia

Training

- Claude Code: Foundations and Pro Techniques – Caravan, 2026
- ChatGPT: Prompting on the Next Level – 2025
- Art Direction with AI – Awwwards, 2024
- Cultivating Creative Collaboration – IDEO, 2023

Experience, continued

JustDice

Lead Product Designer

Apr 2021 – Jul 2021 · Hamburg, Germany

- Led end-to-end design of the 1-2 Cash mobile app, concept through ship; lifted brand impression by ~30%
- Built the modular mobile design system beneath it
- Shaped roadmap and prioritisation with PM and engineering – in a behavioural product the design problem is the loop, not the screen

Finstek

Senior Product Designer

Nov 2020 – Feb 2021 · Minsk, Belarus

- Owned discovery end-to-end: moderated usability testing with 12 active retail traders, friction mapped across every core flow
- Translated findings into a data-driven UX framework the product team adopted – the first dense-data trading product I owned

Wargaming

Senior Visual Designer

Jan 2018 – Jul 2020 · Minsk, Belarus

- Set creative direction for marketing design across a multi-title portfolio – held the quality bar across studios, illustrators and video producers I did not manage
- Ran campaigns spanning several titles, coordinating external studios on execution
- Partnered with the internal UX Lab on iterative user testing of major digital products

Freelance

Product Designer

May 2015 – Dec 2017 · Yekaterinburg, Russia

- Designed product interfaces for startups and small teams – UX, UI, and the systems holding them together

All Clear

Art Director · Lead Designer

Mar 2013 – May 2015 · Yekaterinburg, Russia

- Managed a 4-person design team – hiring input, critique, and growth plans
- Ran client workshops aligning design direction with business strategy; built scalable brand guidelines

Freelance

Brand Identity & Web Designer

Dec 2010 – Mar 2013 · Yekaterinburg, Russia

- Built identity systems end to end – logo, type, colour, usage – then applied them across web and print

Skills

Practice

Design-system governance · Design tokens and theming · Information architecture · UX design · User flows · Data visualisation · Accessibility, WCAG AA · User research and discovery · Product development · A/B testing and experimentation · Stakeholder management · Strategic thinking · Prototyping in code · Motion · Cross-functional leadership · Mentoring

AI practice

AI-native workflow – prototyping in code with AI assistance, moving between canvas and working screen. Designing the AI surface itself – agentic flows, human-AI collaboration, and the trust problem: confidence, provenance, and what the interface does when a model is wrong.

Tools

Figma · Framer · Adobe CC · Claude Code · ComfyUI · HTML/CSS
